

Lean and audit-compliant SAP data storage

Business Case

Audit-compliant storage of SAP archive files, documents and print lists: SAP archive files, documents and print lists should be stored in fixed content store or in the cloud. A content management system (e.g. OpenText) is to be replaced by a cost-effective, simple solution for audit-compliant storage. At the same time, a GDPR-compliant storage system should be implemented.

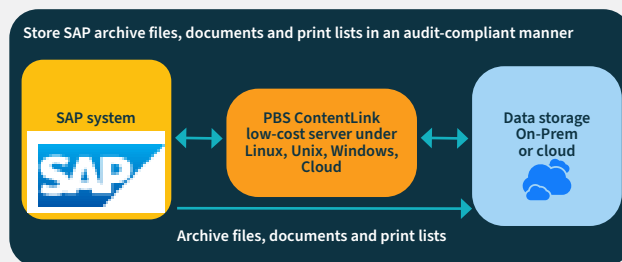

THE SOLUTION

- Lean interface solution to directly connect modern fixed content or cloud storage systems to SAP systems without using a dedicated database (supports all hyperscalers and leading storage providers)
- Cloud-based operation possible
- Supports SAP ArchiveLink and WebDAV 3.1
- Certified by SAP SE for ERP and S/4HANA

THE ADVANTAGES

- Monitored through SAP, no separate user interface required
- Provides full support for SAP Retention Management and is therefore an important module for complying with the GDPR requirements
- Retrieves stored data, documents and print lists via the SAP system
- A special caching option speeds up the

System landscape with PBS ContentLink and storage system

access to the SAP archive files (ADK), data compression for an optimal use of the storage platform.

- ContentReader: Use the SAP GUI or Fiori

App to browse and search for data

- Simple installation, minimal administration effort
